

# HT Series

12-MPPTs, Three-Phase

250KW

The new HT 1500V Series (250kW) is the GoodWe inverter suitable for utilization on solar utilities. This inverter boasts 12 MPPTs, PLC communication and is compatible with bifacial modules. The HT-1500V Series features string level monitoring incorporating as well IV-Curve diagnosis for intelligent detection of voltage and current issues. It includes an AC terminal over temperature protection, designed to send alarms if the temperature of the terminal gets dangerously high. In order to cut overall costs and reduce installation time, this inverter offers the option of including an AC switch. It also features an optional Anti-PID function. The configuration of the HT 1500V can be easily done via Bluetooth and the diagnosis and the upgrading of the firmware can be operated remotely. This outstanding set of features was conceived to ensure the lowest levelized cost of energy (LCOE).
